

PRIMER v6 and PERMANOVA+ software costs for the Wodonga workshop, June 2009

1) There are two products here, separately priced. PERMANOVA+ is an 'add-on' to the non-parametric PRIMER v6 package, greatly extending its functionality for more complex experimental designs and other 'semi-parametric' multivariate problems (regression, discrimination etc). It can only be installed subsequent to installation of PRIMER v6.

2) The course covers all the methods available in PRIMER v6, and participants are expected to possess a licence for this already, or purchase it in connection with the workshop (at a substantially discounted price). An exception can only be made for a student who will, in future, be using only their supervisor's PC (and the supervisor has a registered v6 licence), or will be using a machine covered by a v6 teaching licence at their university. University use of v6 for contractual work requires an appropriate public or private sector licence.

3) The add-on PERMANOVA+ software is not a pre-requisite for the workshop. Some of its rationale and application will be covered in one afternoon session but this will not be at all comprehensive (a PERMANOVA+ course typically takes a further 5 days!). A discount is available, however, if PERMANOVA+ is purchased in connection with the workshop.

4) The lecture materials automatically include copies of the PRIMER methods book ('Change in Marine Communities', 2001) and several recent papers. Two further hard-copy books are only provided with software purchase: a 190pp PRIMER v6 User Manual (2006) comes with PRIMER and a 216pp Guide to Software and Statistical Methods with PERMANOVA+.

5) The standard price lists for PRIMER v6 and PERMANOVA+ can be found on the PRIMER web site (www.primers-e.com). Purchase normally has to be made in GB pounds and there is an additional charge for carriage from the UK. However, for workshop participants only, a discounted AUD\$ price has been set (see below), and no carriage charge will be made for software delivered at the workshop (but no further discount applies for bulk purchase). At the time of writing, the PRIMER prices represent over a 20% discount on the listed price (more if savings on currency conversion and carriage costs are taken into account).

PRIMER v6:	New, academic, single-user licence (workshop price):	\$460
	New, public sector (Depts, museums etc), single-user licence:	\$690
	New, fully commercial, single-user licence:	\$920

Licensed v5 users can upgrade to v6 at 50% of the above prices

PERMANOVA+ 'add-on' to existing v6:	Academic, single-user:	\$280
	Public sector:	\$420
	Commercial:	\$560

A courier cost of \$45 will be added if the software is required in advance of the workshop (ask for quote for courier costs from admin@primers-e.com in the case of a multiple order).

Note: all licences are single-user and registered to a named individual for purposes of providing technical/scientific support to that person. There are, however, teaching lab licences which can be bought in 10-seat packs, solely for installing on teaching lab machines in an academic institution; see the web site www.primers-e.com for details.
