

Science streaks ahead at Yarrawonga College

La Trobe University's faculty of Science, Technology and Engineering visited Yarrawonga College P-12 recently and provided career and course information for years 11 and 12.

A particular highlight was the presentation on engineering careers and study options given by PHD student Eddie Custovic. Mr Custovic's presentation stressed the importance of the 'hands on approach' style of learn-

ing for which La Trobe Engineering is highly regarded.

"With the increasing shortage of engineers in Australia, the Electronic Engineering Department understand the importance of working closely with regional schools to create partnerships that will enhance the student's experience of science and technology," Mr Custovic said. "La Trobe University is pleased to donate a Cathode Ray Oscilloscope, Signal Generator

and Digital Multimeters which will greatly assist the school in the teaching of electricity, sound and physics units."

Roberta Williams, science co-ordinator at the school, said she is extremely pleased with La Trobe University's kind donation.

"I look forward to working closely with the Department of Electronic Engineering in the future," Ms Williams said.

Science Co-ordinator Roberta Williams and students Nicola Nunn, Emma-Louise Horne, Natalie Wilson, Will Currie and Sammee Anderson thank La Trobe University PHD student Eddie Custovic for the science equipment donation.
