

LIFE SCIENCE COMPUTATION SEMINAR SERIES

12-1pm Friday August 14

The Future Bioeconomy and Human Health

Professor Ben Cocks

Research Director, Biosciences Platform and Professor, Animal
Genetics and Genomics, Department of Primary Industries

12-1pm Fridays

Semester 2

Level 1 Seminar Room

Borchardt Library

La Trobe University

Video link-up between
Monash, La Trobe and
Melbourne

Biotechnology continues to provide new solutions for human disease and improved agricultural production. Integrated biosciences research applied to understanding the complete systems underpinning mammalian health, and a revolution in the ability to design organisms, will support new approaches to address global challenges such as limited food supply, human

disease, and greenhouse emissions.
