

HOW DO I? OPTIMISE MY BROWSER

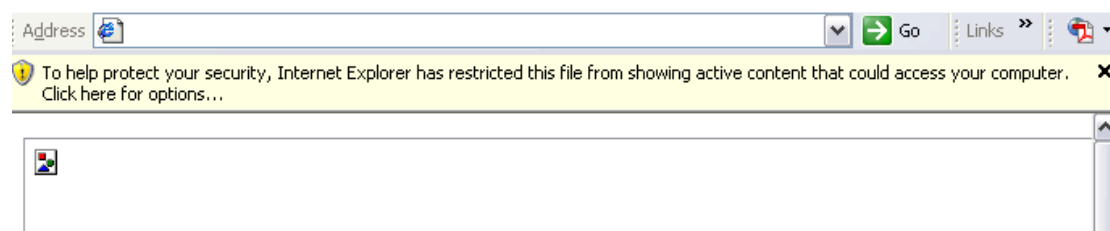

Please visit the website <http://www.webct.com/tuneup/> to check your browser and browser settings.

Optimising Microsoft Internet Explorer

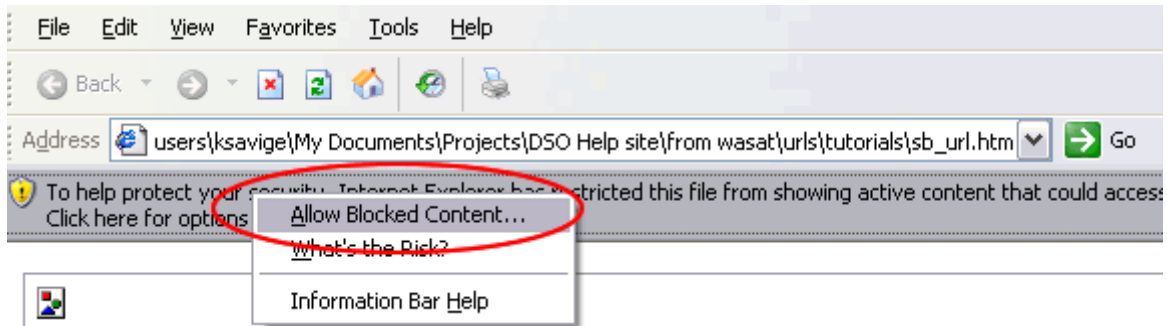

1. Click on **Tools** and choose **Internet Options**.
2. Click on the **General** tab and under **Temporary Internet Files** click on the **Settings** button. Under **Check for newer versions of stored pages**, ensure that **Automatically** is selected.
3. Click on the **Security** tab and under **Security level for this zone**, ensure this is set at **Medium-low**. Click the **Custom Level** button and make the following changes:
 - Windows XP SP2 users only: Scroll down to **Java permissions** and choose either *High, Medium or Low* safety; please do not have either *Custom or Disable Java* selected.
 - Scroll down to **Scripting** and enable *Active scripting* and *Scripting of Java applets*.
 - Scroll down to **User Authentication** and under **Logon** select the *Automatic logon only in Intranet zone*.
 - Click **OK**.
4. Click on the Privacy tab, ensure that it is set at Medium.
5. Click on the Advanced tab and under:
 - **Browsing**, ensure that **Enable third-party browser extensions** is ticked and ensure that you clear the check box for **Show friendly HTTP error messages**.
 - **Java (Sun)**, ensure that **Use Java (1.5.X)** is ticked.
6. Click **Apply** to finish.

Note: If you are using Windows XP SP2, the following additional steps are required to allow files to be viewed successfully:

- Click **Custom Level**.
- Under **Downloads**, under **Automatic prompting** for file downloads, click **Enable**, and then click **OK**.
- If you receive the following yellow warning message when accessing content:

- Click on the **yellow warning message**.
- Click on **Allow Blocked Content...** Then click **Yes** to view the active content.

7. Quit/exit Internet Explorer after you change settings and then re-start the application.
