

2nd year Microbiology 2004 – Summary of student responses

MIC21IM

Overall, the students have been satisfied to well satisfied with the subject. Especially the practical classes have been very well received and many students indicated how much they have enjoyed the “hands on” work. A small number of students reported problems with one demonstrator; these problems have been addressed and dealt with.

MIC22MM

It was again the practical classes that have been enjoyed a lot and many students emphasized the helpfulness and efforts of the demonstrators. Apart from this, the students judged most of the topics covered in the lectures to be very interesting. Some students however, mostly Podiatry students, struggled with the Microbial Genetics section which they found harder to understand because they have not been taught any Genetics before in their previous training. Next year, more time will therefore be spent in the lectures to provide all students with the essential background knowledge that will help them in their understanding.
