

2nd year Microbiology 2007 – Summary of student responses

MIC2IM

In first semester, we have conducted the survey during the practical classes resulting in a much higher number of student responses: 132 students out of the 173 students enrolled have filled out the questionnaires. This is a very high response rate compared to previous years. This is especially true considering the fact that the number of returned questionnaires had to be slightly lower than the enrolment numbers, because repeat students are exempt from practical classes and, although enrolled in the subject, do not contribute to the number of returned student responses. Unfortunately we did not get any student responses for the second semester unit.

In general, the 2nd year Microbiology course proceeded well in 2007 and the students were very satisfied with MIC2IM despite the fact that available resources for the practicals classes and for tutorials have further declined. Overall, the course and particularly the practical components seemed to be as popular with students as they have been in the past. The students also commented very positively on the help and support they received from their demonstrators.

MIC2MVM

Unfortunately, due to problems encountered by conducting the survey online, we did not get any student responses for the second semester unit.
