

3rd year Microbiology 2007 – Summary of student responses

MIC3AMM

The student responses on the subject evaluation questionnaires were very positive. The students appeared to be happy with the way the course was run and they did not seem to have any major problems with the lecture material. This was also reflected in the overall pass rate, which continued to be high. In response to student comments in previous surveys, we have put more lecture notes on WebCT and tried to make them available well before the relevant lectures.

MIC32EPM

Unfortunately, due to problems encountered by conducting the survey online, we did not get any student responses for the second semester unit in 2007.
