Where feminist scholarship on drugs has historically drawn attention to the ways in which drugs are used as regulatory technologies to control the conduct of women, this collection explores the political potential of drug consumption as a mode of resistance to dominant social orders. Inspired by the narcofeminist activist movement, it attends to the life-affirming qualities of drug use that are all too easily erased by dominant approaches to drugs centered on harm and pathology. Centering acts of care, resistance and ingenuity in women and gender minorities' drug practices, this alternative analytic poses radical new possibilities for rethinking drug consumption as a mode of living, capable of transforming social worlds. The panel speaks directly to the</p>		

	<p>conference theme of ‘embracing trouble’, as it draws on the activist concept of narcofeminism to address the complexities of drug use, holding in focus its harms and benefits, risks and rewards, and importantly reflecting on how people navigate these counterposing forces in their situated practices of drug use.</p> <p>The panel will consist of an introduction by the editors and a ‘lightening round’ of presentations or readings from the contributors, centering the voices of narcofeminist activists. Below are the titles and proposed running order of these lightening presentations.</p> <ol style="list-style-type: none"> 1.
