Presentation outline

1. Overview of complex trauma
2. Summary of international evidence specifically related effects of child maltreatment in perinatal period (scoping review)
3. What is this project about?
4. Why are we here?

1. Factors influencing physical, social and emotional wellbeing in Indigenous communities

Source: [http://www.healthinfonet.ecu.edu.au/other-health-conditions/mental-health/review/auz-review; and Australia’s Health 2016 (AIHW)](http://www.healthinfonet.ecu.edu.au/other-health-conditions/mental-health/review/auz-review; and Australia’s Health 2016 (AIHW))

Colonization

Overt violence  Covert structural violence  Psychosocial domination
1.2 What is complex trauma?

- ‘Type 1’ = acute exposure to a single event, with supportive adults to help child make sense of experience.
- ‘Type 2’ or ‘complex trauma’ = cumulative exposure to multiple traumatic experiences that often involves interpersonal violation and occurs within the child’s care giving system.¹ ²
- Currently not a diagnostic category in the Diagnostic and Statistical Manual of Mental Disorders (DSM-5) and a diagnostic category is currently being debated in the International Classification Diseases (ICD) manual.¹³
- Aboriginal people experience as high as 10 - 12 different traumatic events in a life time (Atkinson, 2008; Gee, 2016).

Elevated rates of PTSD in Aboriginal communities: 14-16% (Ralph et al., 2006), 20% (Holmes and McRae-Williams, 2008), 55% (Nadew, 2012), 58% (Atkinson, 2008), 40% (Gee, 2016).

1.3 Toxic stress

Image source: https://www.healingfromcomplextraumaandptsd.com/fear-of-abandonment

Image source: https://developingchild.harvard.edu/science/key-concepts/toxic-stress/
1.4 Child maltreatment the main cause of complex trauma

- Child maltreatment is a global health priority affecting 25 to 50% of all children under 18 years of age worldwide and is a key antecedent of childhood trauma.\(^1\)\(^,\)\(^2\)
- Australian Indigenous children are approximately seven times more likely to have ‘substantiated’ child abuse or neglect than non-Indigenous children (136.6 compared with 19.0; and 38.8 compared with 5.7; per 1,000 children respectively in 2014-15).

![Graph showing the rate of child maltreatment in Australia by state and territory]

Children receiving child protection services by Indigenous status, states and territories (4)

1.5 Physiology of complex trauma or toxic stress

![Diagram of the brain showing Prefrontal Cortex, Hippocampus, Amygdala, Fight, flight or freeze]

1.7 Long term effects of complex trauma

Meaning, morality, existence

Thoughts, memories, beliefs, sense of self

Easily startled, shut down

Coping strategies

Dysregulation

Intimate relationships, including parenting

Health, neural integration, body integrity

Role, purpose, community

2.5 Scoping review of evidence regarding parental child maltreatment in the perinatal period

1. Theories
2. Intergenerational pathways
3. Experiences and view of parents
4. Interventions
5. Screening tools

2.6 Theories

1. Attachment theory
2. Ghosts/angels in the nursery
3. Hidden trauma
4. Social learning theory

Interactions explained by:
1. Belsky’s socio-ecological model
2. Rational development systems theory
3. Family systems theory

Resilience and post-traumatic growth constructs used in:
1. Child Sexual Assault healing model
2. Construct of Anger in healing
2.7 Intergenerational pathways

Summary of studies reporting intergenerational pathways for complex childhood trauma in studies involving parents up to two years postpartum

Mediators/mediators

2.8 Parents views and strategies they currently use to heal

BREAKING THE CYCLE OF TRAUMA

2.9 Interventions

2.10 Screening tools

- Childhood Trauma Questionnaire
- Childhood History Questionnaire
- Adult attachment Interview
- PTSD section of SCID
- Post-traumatic Stress Diagnostic Scale
- Adverse Childhood Experiences questionnaire
- Assessing environments III-History of parents’ childhood parenting experiences
- Trauma History Table Interview
- Trauma Meaning Making Interview
- Child Abuse and Trauma Scale
- Childhood Experience of Care and Abuse
- Trauma section of American Indian Service Utilization and Psychiatric Epidemiology Risk and Protective Factors (AI-SUPERPFP)
- Antecedent Experiences Questionnaire
- Life Events Checklist
- Life Stressor Checklist
- Brief Physical and Sexual Abuse Questionnaire
- Early Trauma Inventory Self-Report Form
- Child Abuse Potential Inventory
- Brisbane Evaluation of Needs Questionnaire
- Index of Need Questionnaire
- Conceptual Change Questionnaire
- Parent child conflicts-tactic scale/conflict-tactic scale

http://cope.org.au/about/review-of-new-perinatal-mental-health-guidelines/
3. Perinatal period: a unique life-course opportunity for emotional healing and preventing intergenerational transmission

- Parenting transition offers a unique opportunity in their life-course for healing, even after severe trauma – for both women and men.
- Most parents are able to provide nurturing care, particularly with social support.
- Potential to disrupt the ‘vicious cycle’ of trauma into a ‘virtuous cycle’ that contains positively reinforcing elements that promote healing (‘earned security’).
- Frequent scheduled contacts with service providers.

3.2 Healing the past by nurturing the future: learning to identify and support Aboriginal and Torres Strait Islander parents who have experienced trauma in their own childhoods.

*Cultures Child, Ink on paper, 2018 © Shawana Andrews*

A father, mother and child wearing possum skin cloaks sitting by a myrnong daisy, the father holds the stem and looks to the daisy as it holds history and knowledge of the ancestors, this gives him strength. The mother holds a newborn and rests against the stem, it supports her. Mother and father are on different sides of the stem representing their different paths and roles in caring and nurturing for children. The daisy is in flower but also has a new bud and speaks of future generations and continuity. The stones below represent a strong foundation of many generations and the stitching on the cloaks represent the relational connectedness of Aboriginal people and worldview. The mother’s hair blows in the wind, representing change.
3.3 Project aims

The aims of the NHMRC study are to:

1. **Assess the acceptability, validity, safety and feasibility of screening** Indigenous parents during the perinatal period to identify those who have experienced complex trauma.

2. **Develop acceptable, safe and feasible intervention strategies** that could be offered during the perinatal period (pregnancy to 24 months postpartum) to support Indigenous parents who have experienced complex trauma, with the goal of promoting healing for the parent and preventing transmission of intergenerational trauma to the child.

3.4 Aims will be achieved using community-based participatory action research (CBPAR) to:

1. **Develop a screening approach to identify complex trauma** including psychometric testing

2. **Co-design potentially effective, feasible and acceptable screening and support strategies:**
   - in-depth qualitative interviews and focus (discussion) groups with prospective and new Indigenous parents who have experienced complex trauma to assess the acceptability and validity of the proposed screening tool; understand complex trauma experiences and generate potential support strategies.
   - workshops with key stakeholders (community members, service providers, clinicians, academics) to reflect on the existing evidence base and findings from the qualitative research conducted to develop the best screening approach and support strategies, including program logic, implementation and evaluation plans.
   - interviews and focus groups with service providers to assess the feasibility with which the proposed screening tool and support strategies may be implemented.
   - interviews and discussion groups among prospective and new Indigenous parents to pilot use of the screening tool and assess the acceptability of proposed support strategies.
3.6 Project structure

- Four monthly newsletters and website information
- Invited to attend four co-design workshops across project
- Invited to every fourth monthly meeting (last Tues 12:30-2:30pm)
- Invited to monthly meeting (last Tues 12:30-2:30pm)

Community and broader stakeholder group (national and international)

- Key stakeholders
- Investigator governance group
- Investigator and project staff operational group

- Further working groups (e.g. environment)
- Steering strategy expert committee
- Small leader advisory group

Screening tool expert committee
Summary

1. Increasing recognition of the importance of complex relational trauma
2. Perinatal period is a unique opportunity for healing and prevention of intergenerational transmission
3. Excited to be walking this learning journey with communities

Questions? (5 min)

A father, mother and child wearing possum skin cloaks and looking to the ancestors and past generations. The parents are connected with a songline which gives them strength. The stones below represent a strong foundation and the stitching on the cloaks represent the relational connectedness of Aboriginal people and worldview.
Activity:
With the people in your table, spend 10 minutes discussing:

- Why are you here? What's brought you to this project?
- What are the most important things for you about this project?
- What do you want to get from being involved?

Write or draw thoughts on the butchers paper and we will share with group (10 mins)

This discussion may inspire your thinking about your ‘hopes and aspirations’ rock art....and we can continue over delicious lunch
