

Weed Species – Bundoora

Environmental weeds are non-native plants that can invade natural habitats, outcompeting native species and disrupting ecosystems. Monitoring these weeds is essential to protecting biodiversity by preventing their spread and ensuring they are effectively controlled or, in some cases, removed.

The map below shows the location of tree weeds on campus:

Note 1: Icon colour is not relevant to tree characteristics or value.

Note 2: Areas with minimal disturbance or limited access are not included in this assessment.
